ELECTRONIC BOOK KIOSK

Field of the Invention

This invention relates to an electronic book (E-book) kiosk. Such structures of this type, generally, allow the user to select an E-book through the kiosk interface and download the E-book directly to the user's reader.

Description of the Related Art

5 It is known, in the publication and distribution of electronic reading materials, to employ an apparatus for viewing electronic reading materials. Exemplary of such prior art is U.S. Patent No. 5,956,034 ('034) to J. Sachs et al., entitled "Method and Apparatus for Viewing Electronic Reading Materials." While the '034 reference employs an apparatus that contains an inventory of
10 written materials in electronic form that can be selected and then downloaded into a portable electronic book memory, it does not disclose the use of the kiosk that allows the user to pay for the desired written materials and then download the materials to the user's personal communication device (PCD).

15 It is apparent from the above that there exists a need in the art for a kiosk, which is capable of downloading selected written materials in electronic form, but which at the same time allows for the user to pay for the downloaded written materials. It is a purpose of this invention to fulfill this and other needs in the art in a manner more apparent to the skilled artisan once given the following disclosure.

SUMMARY OF THE INVENTION

20 Generally speaking, this invention fulfills these needs by providing a method for obtaining electronic reading materials, comprising the steps of: downloading electronic reading materials into a kiosk; selecting a desire reading material title; paying for the desired title; and downloading the desired title to
25 the personal communication device.

In certain preferred embodiments, the reading materials can be downloaded into the kiosk either through the Internet or locally. Also, the user can pay an attendant at the kiosk or by electronic billing. Finally, the desired title is downloaded into the user's personal communication device (PCD) by squirting the desired title into the user's PCD.

In another further preferred embodiment, the kiosk allows the user to review available titles of electronic reading material, select the desired title, pay for the desired title, and download the desired title into the user's PCD.

The preferred kiosk, according to this invention, offers the following advantages: ease-of-use; ability to view electronic reading materials; ability to select desired electronic reading materials; ability to pay for selected electronic reading materials; ability to download selected electronic reading materials; and good economy. In fact, in many of the preferred embodiments, these factors of ease-of-use, ability to view electronic reading materials, ability to select desired electronic reading materials, ability to pay for selected electronic reading materials, and ability to download selected electronic reading materials are optimized to the extent necessarily higher than heretofore achieved in prior, known kiosks.

The above and other features of the present invention, which will become more apparent as description proceeds, are best understood by considering the following detailed description in conjunction with the accompanying FIGURE and in which:

BRIEF DESCRIPTION OF THE DRAWING

The FIGURE is a flow chart that illustrates a method for obtaining electronic reading materials, according to one embodiment of the present invention.

DETAILED DESCRIPTION OF THE INVENTION

With reference to the FIGURE, there is illustrated one preferred embodiment for use of the concepts of this invention. In particular, method 2

for obtaining electronic reading materials at a kiosk is illustrated. With respect to method 2, reading materials are downloaded into a computer (not shown) located in or near the kiosk, as shown in step 4. It is to be understood that the term "kiosk" refers to, but is not limited to, a small, lightweight structure with

5 one or more open sides. This "kiosk", preferably, is located in an area of high people traffic, such as a mall, department store, airport or the like. With respect to step 4, electronic reading materials can be downloaded from the Internet and/or downloaded locally. The term "locally" refers to the instance where the owner of the kiosk can walk up to the kiosk and squirt electronic reading
10 materials from his/her PCD into the computer located at or near the kiosk for further downloading by a user.

The user can browse through the variety of electronic reading material titles and select a title to be downloaded, as shown in step 6.

Once the user has selected a title to be downloaded, the user can then
15 pay for the electronic reading materials to be downloaded, as shown in step 8. It is to be understood that the user can pay an attendant located at or near the kiosk or the user can pay for the desired electronic reading materials by electronic billing, such as through the use of a credit card/debit card reader located at or near the kiosk.

20 After the user has paid for the desired electronic reading materials to be downloaded, the desired electronic reading materials are downloaded or squirted to the user's personal communication device (PCD). A PCD can be, but is not limited to, a personal digital assistant (PDA) or the like which is wirelessly connected to a variety of Internet websites and/or the computer located at or
25 near the kiosk. It is to be understood that the term "squirt" refers to the transmitting of a modulated carrier medium from the computer located at or near the kiosk to the user's PCD that is capable of detecting/reading a modulated carrier medium or vice versa. The carrier medium is modulated in such a way as to include computer executable instructions related to the desired electronic
30 reading materials to be downloaded.

Once given the above disclosure, many other features, modifications or improvements will become apparent to the skilled artisan. Such features, modifications or improvements are, therefore, considered to be a part of this invention, the scope of which is to be determined by the following claims.
